***Election/Restrictions***

This application contains claims directed to the following patentably distinct species:

Fig. 5, Fig 6a-6b, Fig. 7a,-7b, Fig. 8a-8b, Fig. 9a- 9b, Fig. 10a-10b, Fig. 11a-11b, Fig. 12, Fig. 13, Fig. 14, Fig. 15, Fig. 16, Fig. 17, Fig. 18, Fig. 19, Fig. 20, Fig. 21, Fig. 22 discloses different species of a tournament server. As disclosed in Applicant's specification, these figures are different embodiment of each other. Applicant is required to select one embodiment (one Figure) and the corresponding claims to the selected embodiment.

The species are independent or distinct because claims to the different species recite the mutually exclusive characteristics of such species. In addition, these species are not obvious variants of each other based on the current record.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Due to 112 issues, it not clear what the generic claims are.

There is an examination and search burden for these patentably distinct species due to their mutually exclusive characteristics. The species require a different field of search (e.g., searching different classes/subclasses or electronic resources, or employing different search queries); and/or the prior art applicable to one species would not likely be applicable to another species; and/or the species are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

**Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species to be examined** even though the requirement may be traversed (37 CFR 1.143) **and (ii) identification of the claims encompassing the elected species**, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

The election of the species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the election of species requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected species.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the species unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other species.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

***Examiner's Note***

It is noted that these claims have been previously examined. However, the claim amendments (filed on 3/25/08) have necessitated this election of species. The multiple embodiments in Applicants' invention make it difficult to understand the claim invention. It is necessary that only one embodiment of the claimed invention is established in order to help facilitate the prosecution and examination of this application. For example, Claim 1 indicates a tournament that is based on the time remaining the tournament progress and also based on the identifier. This invention appears to represent the embodiment disclosed in Fig. 5 as disclosed in paragraphs 84-85. In this embodiment the timer of the tournament is independent of when the player joins the tournament. This allows the player to play in the time remaining in the tournament in progress. Claim 9 discloses stopping the timer at the request of the player and restarting the time at the request of the player. It is not clear how the timer can be stopped and restarted

Art Unit: 3714

at the request of the player if the tournament has an independent timer. Numerous 112 second paragraphs rejections have been made in the prior office action for this clarification. Applicants provide support from the Applicants' specification to traverse the 112 rejections. However, the argument only describes in the individual limitations that are supported by Applicant's Application. For example, Applicants' remarks/arguments (filed on 3/25/08) traverses the 112 rejection by indicating that paragraphs 242 and 256 provides support the limitation of providing a time balance based on the player's card. However the support for this limitation provides support for the "time balance" tournament or the "floating tournament play". It is not the same embodiment where a tournament set time and end time is determined to calculate the time remaining in the tournament in progress (as required by claim 1). Applicant fails to describe how the claimed invention (which incorporates all of the limitations in the claims) is supported by Applicant's specification as one invention.
